Rhode Island spill-response supply

Rhode Island DEM | MPA 118 | OET27007082

Prepared for Carl Podella | Advanced BioCatalytics / Checked 13 November 2026

Owner: State of Rhode Island / Department of Environmental Management / Statewide response-contractor framework

Put your surface-washing chemistry in the supply chain

Rhode Island's spill-response scope requires cleaning boats and equipment before transport. Accell Clean SWA-NE's published equipment and hard-surface uses give ABC a concrete product to present to response contractors. The commercial route is supplying suitable cleaning chemistry and application support to an authorized responder. Use procurement Q&A to establish how suppliers can reach those teams and submit materials for review. [1, 2, 3]

YOUR SALES SCOPE

Cleaning chemistry and application support for response contractors. [2, 3]

CURRENT STAGE

Initial responder proposals: November 18, noon Eastern. [1]

YOUR NEXT MOVE

Use OSP Q&A to establish the supplier-review route. [1]

Why it fits

01 Equipment must be cleaned before transport. SWA-NE's bulletin describes oil removal from equipment and hard surfaces. [2, 3]

02 The bulletin describes non-emulsifying washing with containment and oil recovery. Match the product to the responder's recovery plan. [3]

03 ABC also lists marine and industrial cleaners. Select the exact formulation with the responder and secure required use/material approvals. [2, 4, 6]

Your first move

Marisa DelFarno | Chief Procurement Specialist

Named solicitation contact. Questions go through OSP Q&A, not direct email. [1, 5]

marisa.delfarno@purchasing.ri.gov | 401-574-9235

Ask: Submit through OSP Q&A: What is the permitted route for a surface-washing product supplier to identify response contractors and have proposed cleaning materials reviewed under MPA 118?

From insight to action

Where your offer fits

PROJECT NEED	YOUR CONTRIBUTION	NEXT STEP
Equipment cleaning [2]	Present SWA-NE product data. [3]	Match the surface, oil and recovery method with a responder.
Marine / industrial cleaning [2, 4]	Offer a task-specific cleaner.	Provide SDS, application data and supply terms for review.
Non-MPA materials [2]	Quote approved chemistry supply.	Obtain coordinator approval before an incident order.

This framework qualifies response vendors for as-needed work. Product sales would follow a responder's approved requirement; it is not a committed chemical order. [1, 2]

People to know

RESPONSE-CONTRACTOR BUYER

Identify through the permitted procurement route. No specific responder's product demand was verified.

STATE ON-SCENE COORDINATOR

Authorizes incident work and non-MPA materials. Federal product-use authorization also applies. [2, 6]

What happens next

- **NOVEMBER 18 -- INITIAL REVIEW**

  Responder proposals due at noon Eastern; this is not a chemical-supplier deadline. [1]

- **AFTERWARD -- QUARTERLY REVIEWS**

  New responses reviewed through December 31, 2028. Initial term targeted January 2027. [1]
